Kurt Smith, Norman D. Willis, Mark Zegarelli : Legendary Logic Puzzles before purchasing it in order to gage whether or not it would be worth my time, and all praised Legendary Logic Puzzles:

I thought that this is what this would be but in many cases it simply math. No real logic - just a word math problem. And where it is a logic problem, they are not overly challenging. I keep hoping it gets better. Some are fun, some are boring so far. Would probably not buy from this publisher again0 of 0 people found the following review helpful. I'm having fun with themBy Chocolate Chip CookieWow! HUGE book! Over 400 pages...definitely got my money's worth. Bought this for my gifted kiddo, but it was too hard for her. However, I'm having fun with them...and will continue to have fun with them for a loooong time, because this is a HUGE BOOK.0 of 0 people found the following review helpful. Good starting pointBy TonyfroGood, but not quite great. I wish the puzzles were slightly more challenging, but I hope that maybe I can use this with my son to get him to start working on them.

It's big. It's challenging. It's mind-bending fun! This enormous collection (400 pages!) of logic puzzles will keep super solvers occupied for hours. That's because each conundrum is a legend in its own time, perfectly constructed to perplex and mystify. Some are stories that provide only slight information to guide you; others resemble a poker game, played in settings ranging from Vegas to Monte Carlo. Still more mislead you with false statements. They're entertaining and a great way to develop your powers of deduction and reasoning!

About the Author Mark Zegarelli is the author of *Logic for Dummies* (John Wiley and Sons). He holds degrees in both English and math from Rutgers University, and has earned his living for many years writing vast quantities of logic puzzles, a hefty chunk of software documentation, and the occasional book or film review.
