**Beverly Post, Sandra Eads : Logic, Anyone?: One Hundred Sixty-Five Brain-Stretching Problems (Makemaster Books)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Logic, Anyone?: One Hundred Sixty-Five Brain-Stretching Problems (Makemaster Books):

2 of 3 people found the following review helpful. Great Book For Introducing Logic.By M. Pryor HerndonI used this book for years to provide openers to my mathematics classes, especiallyin Geometry. I wish there was a Logic Anyone - Part II.12 of 12 people found the following review helpful. Great Brain Stretcher!By A CustomerLogic, Anyone? is a great teaching resource for parents or teachers looking for a way to introduce logic in a non-threatening manner. Each of six types of logic problems are presented in a progressive fashion, one step at a time. The age ranges would probably suit 9 and up or younger depending on the reading and thinking ability of the students. Many exercises are included but what I really appreciate is the emphasis on having students make their own logic puzzles to try and stump each other. The best way to know if a student understands a topic is to have them try to invent a problem of their own. Each section of this book concludes with the students producing original puzzles. Great unit study for homeschoolers!
