Bonnie Risby : Logic Countdown, Grades 3-4 before purchasing it in order to gage whether or not it would be worth my time, and all praised Logic Countdown, Grades 3-4:

0 of 0 people found the following review helpful. I wish I had this series when I was taking the SATs!!By ESBThe kiddo loves the puzzles, and the they are done in a way that the logic relationships more intuitive and make sense. The book breaks down the types of logic puzzles, and how to look for the relationships between the comparison words.1 of 1 people found the following review helpful. Great Intro to Logic ExercisesBy ValvoolMy son is using this workbook in our homeschool. He does find a challenge in some of the exercises but seems to enjoy doing them. He is eight. The book begins with the child having to identify the uniting element in a group of words, such as 'money, grass, iguana, avocado' and next to the word group is a space where the child should write 'all the objects are green'. That is not an example from the book, but gives an idea of what to expect. Overall I am glad we purchased this and I plan to get another Logic Countdown book for my older child.6 of 6 people found the following review helpful. Love this!By

Sweet LifeBought this for my 4th grader. I wanted to make sure my son was getting enough practice with Logic. I was fortunate enough to find this series. It's a great introduction to logic for young students. We're only doing a couple of lessons a week as we're also using another logic book. I liked it so much that I'm ordering this again for my upcoming 3rd grader and ordering the next in the series for my oldest.

This classic series will excite students' imaginations while enriching skills in logical thinking. Logic Countdown problems are easy to incorporate into lesson plans and are formatted to enhance the fullest spectrum of curriculum areas while sharpening thinking skills. Challenging and instructional, these thought-provoking books present sequential exercises in logical reasoning that include relationships, analogies, syllogisms, sequences, deductive reasoning, inference, truth-values, and logical notation. Simple grids coupled with intriguing problems evoke enthusiasm and inspire students to higher and higher levels while of thinking acuity. Each book builds on concepts presented previously in the series to offer a comprehensive logic adventure for young thinkers. The skills students build by using this book are applicable to several areas of the curriculum. Academic skills used for reading, math, writing, and science all depend on the ability to perceive and define relationships and to form inferences. But beyond the academic world, students will find logical thinking an integral part of everyday life. This is the first in a three-book series designed to sharpen children's logical thinking skills. Once students master the skills presented in this book, they will be ready for new challenges in Logic Liftoff and Orbiting with Logic. Grades 3-4
